

# FIRST LIFTING OF THE NILE WATERS TOWARDS THE PURIFYING STATION

## WHERE:

**Sudan** is intensifying the exploitation of the waters of the Nile by carrying out large hydraulic works that will radically change the geophysical appearance of the whole country, transforming a large part of the desert area into an irrigated plain suitable, in the future, for the installation of hundreds of farming and industrial communities and of new urban centres.

## WHEN:

April 2015

## CUSTOMER:

Albadri Co.

## THE REQUEST: REPLACEMENT OF SIX CENTRIFUGAL PUMPS

The waters of the Nile are lifted and sent to the purifying station by 6 normalised single-stage centrifugal pumps, suitable for the transfer of liquids in agriculture, market gardening and industry.
