

FIRE-FIGHTING SET FOR THE FLEXI HALA INDUSTRIAL COMPLEX IN BRATISLAVA, SLOVAKIA.

WHERE:

Nové Mesto is a suburb of the autonomous Bratislava III district, in the city of Bratislava, capital of Slovakia.

Bratislava is one of the few cities in the world, if not the only one, whose name was decided through a public competition.

The Slovakian capital extends over a hill of the Little Carpathians, along the left bank of the Danube and Morava rivers. It's in a great position in relation to the main European communication routes, being 60 km from Vienna, 200 km from Budapest, and 300 km from Prague.

WHEN:

January 2016

INSTALLER:

IVAR CS spol. s r.o.

THE REQUEST:

Inside the industrial complex, and within the *LOGIS Invest* area, is a building with characteristics for adaptation to the light industrial and logistic sectors, designed with a flexible structure, to enable exploitation by many users. For this building, we were asked to install a compact 1KDN fire-fighting set.

The KDN 65 / 200- 190 centrifugal pump with a power of 11 kW has a new generation IE3 electric motor that provides better energy efficiency. The pump also has a standard joint for coupling with electric motors or diesel engines, depending on the design specifications.

All the components can be accessed, making the required inspection and maintenance activities much easier. The electric control panel and the suction and delivery manifolds are assembled by DAB, in order to offer to the customer a complete solution, ready for installation.

Within the fire-fighting sector, DAB offers the possibility of customising the product based on custom specifications, from overall dimensions due to space requirements to many types of accessories, also offering an appropriate support service to ensure compliance with current fire-fighting regulations.

- 1KDN 65-200/190 MD EN 12845-JET
